

Integrated Results

Improve clinical decision-making with real-time access to laboratory and radiology results.

Pictured: **Geraldine Hatton**, PointClickCare Customer

PointClickCare Integrated Results improves the efficiency of clinical decision-making by enabling automatic receipt of laboratory and radiology results into a resident's electronic health record.

Through integration with ancillary radiology vendors and diagnostic service providers, the PointClickCare EHR Platform enables practitioners and clinicians to make more informed decisions, faster, and with more confidence. With PointClickCare Integrated Results, providers receive laboratory and radiology results in real-time.

The results are automatically updated to the resident record, ensuring more accurate and completed documentation is available to the care team when making clinical decisions. Faster clinical decisions lead to improved resident outcomes.

PointClickCare Integrated Results significantly reduces:

- Delays in receiving results
- Chart and provider matching errors
- Error-prone, paper-based processes
- Unnecessary medical imaging
- Time-consuming calls with physicians
- Compliance issues

What is PointClickCare Integrated Results?

Integrated Radiology Results enables providers to receive radiology results electronically in real-time, monitor and review to make results progress notes, and develop treatment plans. The ability to manually load radiology results exists within PointClickCare's EHR, providing physicians with the ability to load, store and review residents past tests, preventing unnecessary, redundant tests.

How does Integrated Results work?

PointClickCare has established a relationship with Liaison® Healthcare Informatics, a data management and security organization that serves the global healthcare industry. Through Liaison, access to laboratory and radiology results from national, regional, and local diagnostic vendors and service providers can be received and stored as a part of a resident's healthcare record within the PointClickCare EHR. Once enabled within the PointClickCare platform, providers have the ability to receive laboratory and radiology results electronically as structured data, or depending on service provider, as PDF or a link to an external image viewer. Once the laboratory and radiology results are successfully received, they are automatically placed in the resident's record, and are available for immediate review.

How do providers benefit?

Improved Care Delivery – Share diagnostic information sooner with the entire care team to improve decision-making, resulting in more timely treatment for residents.

Mitigated Risk – Reduce the potential for errors by having clear, legible electronic results where care providers can easily identify potential problems, risks or trends.

Increased Time Savings – Drastically reduce time spent searching for and managing paper results, and instead, gain quick access to review the results in the resident's dashboard and alter care plans as required.
